

Readme

The class file `mouton.cls` loads the package `endnote.sty` which may not be part of your distribution.

It is likely that your publication will contain numbered linguistic examples. For the sake of simplicity, I strongly recommend using Wolfgang Sternefeld's `linguex.sty` (which, in turn, requires `cgloss4e`). These packages will also be required by the accompanying sample file. (For documentation, please download the respective file from a CTAN server.)

If your publication requires phonetic characters (IPA), I recommend using Fukui Rei's excellent `TIPA package`. (The package comes with documentation, including a character list.)

The most recent version of these packages can be downloaded from any server in the CTAN (Comprehensive T_EX archive network):

<http://www.ctan.org>

(As you will know, additional packages must be saved either in a directory read by your distribution or in your working directory.)

For general questions regarding L^AT_EX please have a look at the FAQ:

<http://www.ctan.org/tex-archive/help/>

Please send problems you encounter in using `mouton.cls` as well and bug reports to:

eyrich@math.tu-berlin.de

Happy T_EXing,

Christoph Eyrich
